Supplementary shift.

Today was quite busy at the clinic; way too many patients coming in sick. One came in post sailing the seas, looking for a cure to their gum disease. **This sailor is experiencing scurvy, so should be prescribed Vitamin C.** Another, in the RAF they flew, seeking a way to make their vision true. **This is referencing a myth that carrots and Vitamin A give good vision.** The third craved chokeberries, hoping this scent would attract bees. **Flavonoids are known as Vitamin P, and are found in chokeberries. For plants, they are used to attract pollinating insects.** Next had so much dandruff on his pillow, so I prescribed him to chew upon some willow. **Salicylic acid, known as Vitamin S, is used to treat dandruff as it removes the outermost layer of skin. The name is derived from Salix, the Latin for willow.** Following had ulcers whose stomach they ravaged, for them I mixed barley and cabbage. **S-Methylmethionine, found in barley, is used to treat ulcers. Garnett Cheney called it Vitamin U for anti-ulcerogenic properties also found in cabbage juice.** Then a lady brought rats saying they wouldn't lactate, but this really should've been the vet's case. **5′-Methylthioadenosine, or Vitamin L_2, deficiency inhibits lactation in rats.** The last walked in with an ataxic gate, so I prescribed some drugs so they wouldn't oxidate. **This is indicative of Vitamin E deficiency, and Vitamin E is an antioxidant.**

Together, these are vitamins: C, A, P, S, U, L, E.

Answer: **CAPSULE (7 letter word)**
